

Pham Minh Chien

AI Engineer Intern / Junior AI Engineer

📍 Ho Chi Minh City, Viet Nam ✉ pminhchien2006@gmail.com ☎ 0766 302 634 🌐 ChienPM-27

Professional Summary

Information Technology student at Sai Gon University with a strong interest in Artificial Intelligence, Computer Vision, backend development, and mobile application development. Experienced in building academic and personal projects involving AI-powered image processing, single-image 3D reconstruction, mobile-to-backend integration, and cloud GPU deployment. Familiar with Python, PyTorch, FastAPI, React Native, Expo, Google Cloud VM, and pretrained AI models. Currently focusing on practical AI engineering skills, including model inference pipelines, API development, debugging, and deployment.

Education

B.Eng. Sai Gon University , Information Technology	Ho Chi Minh City, Viet Nam Sept 2024 – Mar 2029
- Studying core topics in programming, software development, data structures, databases, web development, and artificial intelligence. - Building academic projects related to computer vision, 3D reconstruction, mobile applications, and backend systems. - Actively learning AI engineering, machine learning deployment, and cloud-based inference pipelines.	

Project Experience

AI 3D Reconstruction System / 3DRecon , AI Backend & Mobile Integration Developer	Ho Chi Minh City, Viet Nam 2026 – present
- Built an AI-powered 3D reconstruction system that allows users to capture an object image from a mobile application and generate a 3D mesh output. - Designed the end-to-end workflow from mobile image capture, backend image upload, image preprocessing, AI model inference, to 3D file export. - Developed backend APIs using FastAPI to receive images, process reconstruction requests, manage AI jobs, and return generated 3D model files. - Tested and integrated pretrained single-image 3D reconstruction models, including Hunyuan3D-2, TripoSR, TripoSG, and SF3D. - Deployed and tested the AI inference pipeline on a Google Cloud VM using an NVIDIA L4 GPU for heavy model inference. - Worked with image preprocessing techniques such as object cropping, background removal, and segmentation using YOLO and rembg. - Exported generated 3D models in common formats such as GLB, OBJ, and PLY for previewing and further use. - Built and compared a custom ResNet50 + MLP point cloud baseline using the Pix3D dataset before switching to stronger pretrained 3D reconstruction models. - Evaluated baseline model performance using Chamfer Distance, F-score, precision, and recall. - Integrated the FastAPI backend with a React Native / Expo mobile application so users can send images directly from the app to the AI server. - Debugged GPU, dependency, CUDA, PyTorch, model loading, and cloud deployment issues during development. - Prepared technical reports and presentation materials explaining the system architecture, baseline model, pretrained model comparison, and deployment process. Technologies: Python, PyTorch, FastAPI, React Native, Expo, Google Cloud VM, NVIDIA L4 GPU, Hunyuan3D-2, TripoSR, YOLO, rembg, Pix3D, GLB, OBJ, PLY	

Keysmith E-commerce Website, Frontend Developer / Admin Dashboard Developer

Ho Chi Minh City, Viet Nam

2025 – 2026

- Built a static e-commerce website for custom keyboard products using HTML, CSS, JavaScript, and jQuery.
- Developed frontend sections including homepage, product display, carousel, contact page, login/register modal, and responsive navigation.
- Worked on admin dashboard features, especially analytics and warehouse management sections.
- Implemented UI components for sales reports, customer statistics, inventory tracking, product display, and dashboard layout.
- Used Git and GitHub for team collaboration, branch management, merging code, and resolving conflicts.
- Improved website layout, visual consistency, and responsive design for different screen sizes.
- Assisted in preparing the project for deployment using GitHub Pages / static hosting workflow.
- **Technologies:** HTML, CSS, JavaScript, jQuery, Git, GitHub, Responsive Web Design

Skills

Programming: Python, JavaScript, TypeScript, HTML, CSS, C/C++**AI / ML:** PyTorch, Computer Vision, Image Segmentation, 3D Reconstruction, Point Cloud Processing, Pretrained AI Models, Model Inference**Backend:** FastAPI, REST API, Uvicorn, API Integration, Image Upload Handling**Mobile:** React Native, Expo, AsyncStorage, Mobile UI Development, App Navigation**Web:** HTML, CSS, JavaScript, jQuery, Responsive Web Design**Cloud / Deployment:** Google Cloud VM, NVIDIA GPU, ngrok, GPU-based AI Inference, Cloud Debugging**Tools:** Git, GitHub, VS Code, Jupyter Notebook, Google Colab, Postman**Soft Skills:** Self-learning, Problem Solving, Teamwork, Debugging, Technical Presentation
